NOKOO

AGENT CONTROL PLANE

LOCAL FIRST | PRIVATE | YOURS

A PRODUCT BY KABANI TECH

01

The control layer for AI agent operations.

Nokoo helps teams run AI coding agents with routing control, usage visibility, live quota monitoring, and human oversight — all from one local control plane.

05

Route. Measure. Notify. Respond.

Built for AI-native teams, startups, and innovation ecosystems.

NOKOO

AGENT CONTROL PLANE

LOCAL FIRST | PRIVATE | YOURS

A PRODUCT BY KABANI TECH

01

Operational control for AI-native teams.

As AI coding agents move from experimentation to real work, teams need visibility, routing control, human oversight, and usage governance. Nokoo provides that operational layer — on your machine, on your terms.

01 WHY IT MATTERS

Human oversight
When an agent is blocked by a permission, question, failure, or decision, Nokoo alerts the right person and carries the answer back.

Usage governance
Track token usage, cost, and live quota across agents, providers, projects, and sessions.

Control without lock-in
Route across providers and wire formats without changing the agents your team already uses.

02 WHO IT SERVES

AI startups
Run multi-agent product and engineering workflows with better control.

Innovation programs
Give founders and teams a practical layer for responsible AI operations.

Enterprises & teams
Add oversight and visibility before agent usage scales out of control.

Ecosystem stakeholders
Understand Nokoo as enabling infrastructure for the next generation of AI work.

03 WHAT NOKOO DOES

Notify
Human attention requests

Route
Provider and model control

Measure
Usage and cost visibility

Quota
Live balance monitoring

04

Built first for AI coding agents. Designed for the broader future of agent operations.
